

Biolink Prepare

Biolink Prepare is a multi-species, microbial soil treatment used as part of an effective post-harvest stubble management program.

Biolink Prepare helps enrich the soil and make your farming enterprise more sustainable because it:

- Assists in the **breakdown of crop, stubble**, and grassland residuals
- Supports the **vigour of seedlings** and emerging crops and grasses
- Can be used as **part of a fertiliser program** for all plants and in turf, garden, and lawn management.
- Builds **water and nutrient holding capacity** in soils
- Helps in the **development of humus** from your own home-grown resource
- **Reduces environmentally harmful carbon emissions** caused by stubble burning

ACTIVE INGREDIENTS

Blood meal, fish meal, bone meal, humic fulvic acid, pulse/cereal biproduct & microbial inoculants

Available in 20kg bags
or 1 tonne bulk bags

Directions for use:

1. Apply PREPARE onto crop and plant residuals in the paddocks straight after harvest. Use 20 to 50 kgs per hectare.
2. Lightly till to incorporate the product into the soil.

Effective use of your crop stubble not only reduces the carbon emissions caused by stubble burning, it's a more sustainable use of your on-farm resources.

NOTE: Biolink does not guarantee yield or performance.

Active ingredients: how they work

BLOOD MEAL is high in Nitrogen which stimulates the microbes to break down compost and manure sludge materials. It also helps balance the Nitrogen (green material) and Carbon (brown material) ratio in compost piles. The result? When the compost or effluent sludge is applied to the soil, this energy is much more readily available.

FISH MEAL is high in Phosphorus and Nitrogen, allowing the bacteria and fungi in your compost piles or effluent ponds to proliferate.

BONE MEAL is a rich source of Phosphorus and Calcium.

PULSE/CEREAL BIPRODUCT is a carrier plus the readily available carbohydrate and proteins to feed the soil microbes

MICROBES are an inoculant for compost heap and manure sludge, with favourable bacteria for an effective and quick breakdown of waste materials.

HUMIC FULVIC is a fungal stimulant. It buffers excess salt and toxins. Humic and Fulvic are concentrated Carbon sources.

A MICROBIAL BLEND of *Bacillus subtilis*, *Enterococcus faecium*, *Lactobacillus plantarum*, *Lactobacillus casei*, *Pediococcus pentosaceus*, *Aspergillus oryzae*, *Aspergillus niger*, *Saccharomyces cerevisiae*.
